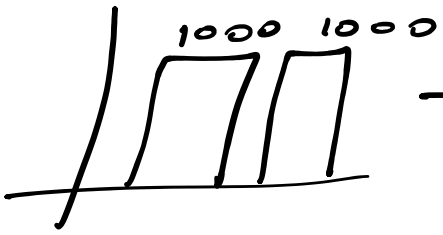
Balanced Data

If target column has equal or same amount of classes.

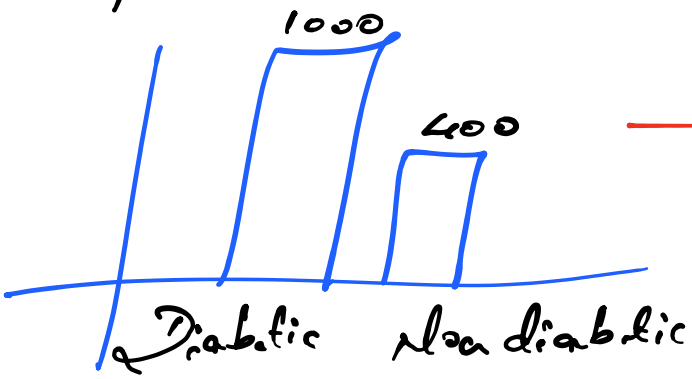
→ Diabetic / Non diabetic



→ Balanced data

Imbalanced Data

One of the class in target variable will have more observations compared to other one.



→ Imbalanced Data

Why Balancing?

→ To overcome Biased

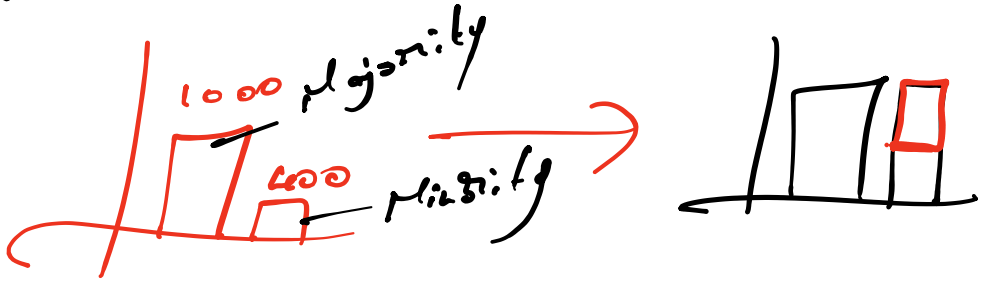
→ used in classification

How to balance Data?

How to balance

① Oversampling

Process of increasing observations in minority class by duplicating values to match with majority class



Limitation

Increase in Duplicates

Undersampling

Process of reducing observations from majority class to match with minority class.

Limitation

Loss of information.
